

Getting Started:

1. Unzip the ExpTracker.zip into any folder of your choice.

2. Open the folder on VS Code or any IDE

The folder shall be like this:

ExpTracker\$ /

3. Create Virtual Env

a. Windows:

`python -m venv myenv`

`myenv\Scripts\activate` - to activate the environment

`deactivate` - to deactivate

4. Once activated:

Run command:

`pip install -r requirements.txt`

Open two command terminals being on the same folder

1st terminal.

Run:

`uvicorn main:app --reload`

2nd Terminal

Run:

`streamlit run app.py`
